

# Setup Tips

## **Gearing**

The gearing of a car has an impact on both the acceleration and top speed.

If you want your car to be “quick” and launch hard with a super quick 0-60mph time, you’ll need low (short) gears.

If you want your car to be “fast” and have a high top-end speed, you’ll need high (tall) gears.

The numbers can be deceiving in that a high gear ratio has a low number, and a lower gear ratio has a higher number.

You have to remember, they are RATIOS, so the numbers can fool you.
